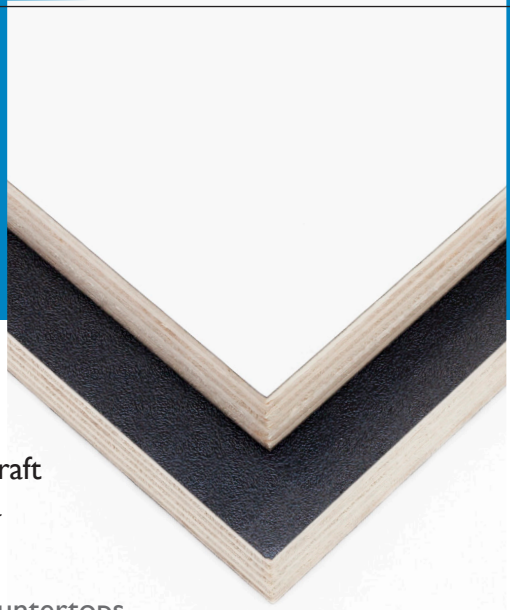
High Pressure Laminate



HPL - High Pressure Laminate - is composed of layers of craft paper, a single layer of decorative paper, and finished with a protective layer of melamine resin.

Product is widely used for surface decoration, such as countertops, cabinets, doors and walls in modern homes and commercial buildings.

Other uses include bathroom doors, furniture, paneling, partitions, shelving, etc.

Advantages include beauty and durability easy to clean. Resists scratches and stains. High resistance to heat and physical/chemical dedgradation.

The common color of the HPL plywood is white, but other colors and patterns are available.

Product is designed for both horizontal and vertical applications where, appearance, durability and strain resistance is required.

Panels are to be intended for applications with exposed or unexposed backs of pieces faced for High Pressure Decorative Laminate and not for use as a structural material or to be mechanically fastened.
